### Notes to Kasanka Birdlist

<b>General</b>	
	This list is managed by Frank Willems (Kasanka Trust). Please send any comments or additions (with pictures or good description) to <a href="mailto:info@kasanka.com">info@kasanka.com</a>
	The list was initially designed and compiled by Bob Stjernstedt, who also managed it up till 2008.
	All records have been discussed with and are approved by the Zambian Ornithological Society (Pete Leonard)
	The taxonomy in this list follows 'The Birds of Zambia' (2008) by Dowsett, Aspinwall & Dowsett-Lemaire and 'Important Bird Areas in Zambia' (2005) by Leonard.
	Two taxa which are regarded subspecies by 'The Birds of Zambia' but regarded full species by many other authors, are included in the list. These taxa are Yellow-billed Kite (separate from European Black Kite), and African Reed Warbler (separate from European (incl Caspian) Reed Warbler).
	The species total does not include the two taxa mentioned above, for purpose of correct comparison with other IBA lists as kept by ZOS/Leonard.
	Names basically follow 'Birds of Africa South of the Sahara' (Sinclair & Ryan) but many "old names" are also given for convenience.
<b>Abundance</b>	
	For each species an indication of abundance is given. This score is a reflection of the observation probability rather than the population size. As an example, Wattled Crane is given "3" as score, as it is seen frequently, despite a population in the park of only 2-5 birds (1 breeding pair). In contrast, Black-rumped Buttonquail is given "1" as there are only a handful records. However, there are probably tens of breeding pairs annually.
0	No recent records (2006-2011)
1	Rare, not recorded annually, generally less than 10 records
2	Scarce, recorded during less than some 10% of birding days (typically less than 10 records per year)
3	Fairly common, recorded during at least some 10% of birding days
4	Common, recorded on most birding days in period of occurrence

5	Abundant, recorded almost every day in period of occurrence
<b>Breeding</b>	
0	Species does not breed (e.g. Palearctic migrants) or is not suspected to breed (e.g. wanderers and/or habitat not present, such as White-necked Raven).
?	Species could well breed (e.g. seen regularly and breeding known for similar habitat elsewhere in Zambia) but there are no indications that it does so.
b?	Species is expected to breed (e.g. resident in the area) but this has not been confirmed.
b	Confirmed that species breeds (e.g. nest or begging juveniles observed, or frequent singing/displaying).
